Trash
Management**

Reducing the costs and problems of trash

Who is American Trash Management?

Since 1990 American Trash Management (ATM) has provided sophisticated, cost-saving trash management products and services to private and public sector customers throughout the United States. ATM's mission is simple: reduce the costs and problems of trash.

What is "trash management"?

"Trash management" is the continual application of sophisticated, integrated management tools to all trash-related disciplines—hauling, diversion, equipment, site design and construction, repairs, maintenance and odor control—with the goal of reducing costs and solving problems.

Benefits of trash management

- reduced waste disposal costs
- better audit trail
- increased benefits from waste diversion
- lower labor costs
- more efficient operations
- higher returns on investment
- cleaner environment
- safer work areas

ATM combines sophisticated analysis with industry expertise to provide its client with the best in "trash management."

Trash management strategies

- building a partnership (we're your "trash department")
- right-sizing and competitive bidding
- compactors and balers
- SmartTrash™ wireless monitoring systems
- self hauling
- integrated material handling systems
- waste diversion that "pencils"
- odor control
- audits and bill paying
- Repairs, PMs and troubleshooting
- hauler and government interface

ATM's hands-on approach—from site surveys to construction management—ensures your project will be successful, on-time and at budget.

Providing a turnkey system

The right waste-reduction equipment is a critical part of trash management. ATM provides fully featured and integrated systems on a true turnkey basis. From determining the return on investment to directing architects and engineers in trash site design, specifying the optimal system, doing construction work and installation, and finally training your staff, ATM can do everything—so you don't have to worry about anything.

Keeping your equipment in good working order

ATM recognizes that successfully managing a trash system means addressing "nuts and bolts" issues such as equipment upkeep. ATM provides high quality repair, preventive maintenance and installation services throughout the U.S.

Solving odor problems in a safe, effective way

Through its Piiian Division, ATM provides its clients with an effective, safe and earth-friendly solution to odor control problems. Piiian's delivery systems are engineered for easy usage and long life. Piiian Odor Neutralizer has been proven effective in laboratory tests: it doesn't just mask odor-causing molecules, it actually destroys them. And Piiian's products are attractively priced, far less than ozone generators (and with none of the health and equipment issues associated with ozone).

Trash management = your trash department

Ultimately, trash management is about building a relationship between you—our client—and ATM. As our current customers can attest, it's a relationship that goes beyond specific products and services. We become your partner, someone you can email or phone at any time to discuss trash-related issues. In essence, we become your trash department, making sure that you successfully reduce the costs and problems of trash.

ATM's SmartTrash™ system optimizes compactor pickups, making sure the unit is pulled when it's nearly full, but not packed out.

The SmartTrash™ System

"Trash management" means enjoying low hauling costs without hassles. ATM's SmartTrash™ technology + a trained technician ensures that result: optimizing compactor pickups, providing over-the-phone troubleshooting, interfacing with haulers, bidding out contracts, auditing bills and scheduling and tracking equipment repairs and maintenance.
